

Dear Sadaf,

My name is Lucas Marcelli and I wish to express my interest in the software development position for Plastic Mobile. Having completed my Bachelor's Degree in Computing in 2015, my expertise is informed by over seven years of programming experience. I have cross-platform proficiency (Unix and Non-Unix based) and fluency in many programming and scripting languages, including: Java, C#, Python, HTML/CSS and Javascript. I am comfortable in different frameworks, including Django, MySQL and Bootstrap and enjoy the challenge of staying at the bleeding edge of new technologies. My internship at OpenDNS in San Francisco as well as running my own not-for-profit company called Code for Kids for three years gave me experience in project management, relational database management and lifecycle development. Some personal side projects are outlined at <http://marcelli.ca>

My experience would enable me to step into a software development team and hit the ground running. You may reach me at [\(647\) 460- 0717](tel:6474600717), or by emailing [lucas@marcelli.ca](mailto:lucas@marcelli.ca). I look forward to speaking with you and appreciate your consideration. My resume is always changing as I develop skills so an updated version of my resume can always be found [here](#).

Best,  
Lucas Marcelli
